

Ole Andreas Alsos
Associate Professor II
Department of Computer and Information Science,
Norwegian University of Science and Technology

July 1, 2014

To whom it may concern:

Letter of recommendation

I hired Åsmund Eldhuset as my co-lecturer in the subject TDT4262 Prototyping Interactive Media, at the Norwegian University of Science and Technology, Spring 2014. The subject is given to product design students, and the aim is to teach the students how to make interactive products using electronics and programming.

His work has been to...

1. plan and give programming lectures in Processing (a programming language),
2. teach the use of Arduino (an open source electronics prototyping platform), and
3. be a resource for the students in practical assignments and team projects.

His work has been prepared and performed in an outstanding way. In addition, Åsmund has received excellent feedback from the students: He has been characterized as *skilled*, *dedicated*, and *pedagogical*. He has, without doubt, inspired many of the product design students to choose the master's programme in interaction design.

I am *very* satisfied with Åsmund's work. I am also very humble to have been given the chance to work with such a great educator as Åsmund.

Sincerely,

Ole Andreas Alsos
